Re: First Assignment – To Be Completed Prior to our First Session

#### Folks,

Welcome to our two-day seminar on data analysis and basic statistical concepts. I have a brief "assignment" for you to consider prior to our time together.

Please examine the four datasets below. Simply articulate what these data mean to you. Use any qualitative and/or quantitative tools you like; Microsoft Excel's 'Data Analysis' add-in/toolkit is perfect for this analysis. Again, just describe what's going on.

If it is helpful to you to assign names to the x- and y-values, feel free. Also, feel free to analyze each separately and then compare results. In the end, simply describe what's going on with these datasets:

I look forward to working with you in February. Please bring your "solutions" to this assignment to class for discussion. Note that laptop computers <u>are not</u> required, but I will use some statistical output in some of the sessions to motivate some of the topics on the agenda.

Sincerely,
